

7 Reasons Why to have window film installed.

1 Decrease Heat

Today's window film is extremely efficient at controlling the effects of solar energy. Films can provide up to 78% heat reduction as compared to untreated glass.

2 Reduce Fading

Window film blocks 99%* of UV rays, providing a sunscreen while reducing solar heat. Minimizing these causes of fading protects your valuable furnishings.

3 Cut Glare

There is no need to put up with annoying glare. Whatever the cause—direct sun, reflections from snow, water, or surrounding buildings—there is an ideal film solution.

4 Improve Comfort and Enjoy Energy Savings

Don't live with temperature imbalances caused by areas of extreme sun or shade, which can limit use of interior space. Window film can remedy this problem and reduce air conditioning costs.

5 Increase Safety

Shattering glass is a hazard when accidents happen, or when vandalism or environmental effects cause breakage. The protection offered by window films can provide a functional "safety net" that will make you feel secure.

6 Enhance Appearance

A smart, uniform look improves the appearance of the exterior of your home or building. Several window film products can create this gratifying look.

7 It's Fast and Easy

Professional installation is fast and non-intrusive. There's minimal disruption to occupants' lifestyle, activities, or work schedules.

*Our clear safety and security films block 98% or more of UV.
